

Hourly Package

The Hourly Package feature allows passengers to book a cab for a fixed duration (e.g., 2, 4, 6, 8 hours) with predefined distance limits. It ensures flexibility, cost-effectiveness, and convenience for users who need a vehicle for multiple stops within a city.

Scope

- Available in all areas
- Includes fixed fare for time and distance with additional charges for extra usage.
- Driver assignment happens just before the ride begins to optimize availability.

Business Objectives

- Provide customers with a flexible, time-based ride option.
- Increase revenue by offering longer-duration rides.
- Optimize driver utilization by reducing idle time.
- Enable smoother manual and auto-allocation of rides for agents.

Feature Flow & Functionalities

Admin Portal (Configuration & Management)

Admin should be able to create and manage hourly packages for each city with the following attributes:

- Applicable Cities (Define in which cities the package will be available)
- Package Time Slot (Min & Max minutes) (e.g., 2hrs - 2:20 mins)
- Distance (Min & Max KM limit) (e.g., 20 - 25 km, 40-45 km, etc.)
- Package Fare (Fixed price for the package)
- Vehicle category We need to set per hour price
- Additional Charges
 - Extra KM Fare (Charge per km beyond the package limit)

Note: A package minimum duration needs to be 1 hour and maximum duration needs to be 24 hrs

If any package goes more than 24hrs, then we will convert it as an out station trip.

Notify user with bottom sheet & notification to inform his that his package is going to extend

Hourly packages will work based on the configuration set for each city, Pricing and ride logic will follow these settings strictly.

Passenger & Driver App Flow

Passenger App - Ride Booking Flow

- Passenger selects the Hourly Package ride type in the app.
- The system displays available packages for that city (e.g., 2, 4, 6, 8 hours).
- The passenger selects the desired package and confirms the booking.
- Driver allocation won't happen immediately; instead:
 - Ride request is pushed to the agent portal of that city

Trip Start Process

- The current odometer reading (Driver inputs this in the driver app) is displayed to the passenger along with ride OTP.
- The passenger confirms the reading and shares the ride OTP with the driver.
- The ride starts after OTP verification.

Trip End Process

- At the end of the ride, the final odometer reading is captured (Driver inputs this in the driver app).
- The passenger confirms the reading and shares the end ride OTP.
- The driver enters the OTP, and the trip is completed.

Fare Calculation

The final fare is calculated based on:

- Distance traveled (start vs. end odometer reading).
- Total trip duration.
- Pickup and Drop waiting charges (if applicable).

Driver App Flow

- The driver gets notified once the ride gets assigned to him manually from the agent portal.
- The driver sees the trip details and starts the trip.
- On reaching the pickup point, the vehicle's odometer reading is entered and awaits for passenger start trip OTP.
- After passenger OTP confirmation, the ride begins.
- The driver follows the trip as per the package duration and distance.
- At trip end, the final odometer reading is entered in the driver app.
- Once the passenger shares the end ride OTP, the trip is closed, and fare calculation happens.

Agent Portal Flow

- All hourly package ride requests are visible to the city's agents.
- Agent Assignment (Manual & Auto):
 - 20 minutes before the ride, the agent assigns a nearby driver manually.
 - If no manual assignment is done, auto-allocation triggers 10 minutes before the ride start time to find an available driver.
- Once assigned, driver and vehicle details are shared with the passenger.

Business Rules & Conditions

- If the passenger exceeds the package KM limit, extra charges apply per km.
- If the trip exceeds the package time limit, extra charges apply per hour.
- Passengers must confirm both start and end odometer readings to avoid disputes.
- If no driver is available, the ride gets auto-canceled 5 minutes before start time.
